

Sage Advice from the Roundhouse....

FRAGRANT Natives

As an adaptation to the arid climate in which they grow, many California native plants have high concentrations of oils that are very pleasantly fragrant. Simply rub or crush the leaves to release these sweet, minty, pungent and balmy perfumes. Try planting them next to a path, where passersby will brush against them. You're sure to find them irresistible!

Artemisia californica, California Sagebrush

Calycanthus occidentalis, Western Spicebush

Cleome isomeris, Bladderpod

Cupressus forbesii, Tecate Cypress

Eriodoyction californica, Yerba Santa
